

FUNCTIONAL REQUIREMENTS

ID	DESCRIPTION	PRIORITY	ACCEPTANCE	RATIONALE	
001	The system shall receive audit logs from registered enterprise application and source application identifiers	HIGH	Logs submitted by two registered applications are accepted with their source identifiers	Centralizes record while preserving their origin	
002	The system shall allow authorized users to search and filter audit logs by date,source and event type	HIGH	For a test dataset with known matches a combined filter query returns all and only the matching records	Helps users to locate relevant audit evidence	
003	The system shall allow security auditors to verify exported records against protected reference	HIGH	An unchanged export passes verification ; changing any tested records causing verification to fail and identify affected records	Helps detect tampering with exported evidence	
004	The system shall prevent users from modifying or deleting stored audit record during configured retention period	HIGH	Update and deletion attempts against retained records are rejected and records remain unchanged	Preserves audit evidence	
005	The system shall allow compliance officer to configure which PII fields must be masked	MEDIUM	After a supported field is added to the masking configuration, newly submitted logs containing that field are stored with its value masked	Supports changes in privacy requirements	

NON-FUNCTIONAL REQUIREMENTS
